

Boomtown v0.10.1 Session Summary

Best Git Branch

feature/foundation-cleanup

Repository: <https://github.com/pl123456789/Boomtown>

Summary

Today's session ended with the project stable. Bill's movement was tested successfully, the foundation-cleanup branch is synchronized with origin, and no gameplay regressions were found during testing. The camera, waypoint movement, Bill/Ted, character generator, and gold panning remain operational.

Before Merging to main

Review the modified generated Ted material files and the scene file. If they are intentional, commit them separately (or discard Unity-only noise). Once the working tree is clean and verified, merge feature/foundation-cleanup into main and tag v0.10.1.

Next Development Goal

Implement the Prospecting Gameplay Loop: walk to river, pan for gold, receive geology-based results, accumulate gold, assign Ted to productive claims, and begin the economy that leads into the first buildings.
